

James L. Romero

Senior Computer Science at Chapman University

I define programming as a form of art. A painter can use their canvas to paint just about anything they see or imagine. Programmers in my opinion has that same unique ability. My passion runs in parallel with this idea. I have a tremendous work ethic and have always sought the greater challenges. The military was one of the challenges which provided me the opportunity to succeed under pressure. I learned how to be resilient and lead many operations in doing so. Majoring in Computer Science was another great challenge in itself. By hiring me, you get a man of purpose and fortitude.
